Protegent Internet Security Solution

The word "Protegent" is originated from a French word "Protégée", which means is "To Protect".

A real Internet security suite should extend beyond malware protection and provide comprehensive security against online threats to your computer, your files, your finances, and your family.

Protegent Internet Security with its two tier protection has been designed to protect our system from all kind of viruses, spy-wares, mal-wares, root-kits and protects our incoming and outgoing data. It also provides the option to prevent your important data from loss There are several unavoidable conditions which lead to data loss and create bad condition so we need to go for data recovery but there is no guaranty to recover the complete data, but with the help of our "crash Proof" data loss prevention software you can get your data back as it was.

Description & features of Protegent Internet Security Solution

Keep your identity and family secure online with comprehensive, real-time antivirus, antimalware, firewall, spam filters, and parental controls

Bi-Directional Firewall	Our bidirectional firewall guarantees a global protection, blocking the incoming and outgoing traffic (through Internet and/or LAN) to unauthorized persons or unauthorized files. The double control makes impossible any form of unauthorized activity. Special shields prevent intrusions from local net and Wi-Fi net. Placing itself in the firing line, the bidirectional firewall keeps your Pc far away from hacker and malware, leaving you calm and relaxed while using your computer and Internet.
Proactive Protection against the threats	The Host protection monitors the behaviors of the others software and its interactions with the Network, in order to prevent violations and transmissions of information from your PC to unauthorized persons.
Complete protection against any malware	The Anti-malware system of Protegent Security Suite is the perfect combination between the Antivirus technology and the Anti-Spyware technology. Any access are constantly monitored and controlled for all the attempts of access and activation of malware in the PC. Any time the anti-malware found a threat, it is immediately disinfected, removed or put in quarantine. You can scan the entire system with one click button.
Advanced Web Navigation	Thanks to its versatility, the Web Control module allows you to have a safe web surfing also in the darker and dangerous zones of Internet. You will keep away from infected website, also limits your exposure to potentially harmful applications and blocks any attempt of spreading's of personal information, always keeping your identity hidden.

Software Self-protection	Protegent Security Suite cannot be disabled or blocked from external attacks. Thanks to the solid protection of all its components, Protegent Security Suite do not allow any form of tampering of the software, thus is impossible, to any unauthorized user, the deactivation or the closing of the active protection.
Resource Optimization	Protegent Security allows you to maximize the operating performance, decreasing the amount of utilized resources. The software is optimized in order to offer the highest speed of analysis and immediate answer to the attacks, without however making a dent to the total performance of the computer that will continue to operate as if the software were not activated.
User friendly interface	Protegent Security Suite is easy and immediate to configure, in a position to answering the requirements of all its users, experts and newcomer. Thanks to the automated and context-sensitive help function, the software learns to manage independently alarms of the firewall, leaving you completely free from any thought or worry about the system security.

Crash Proof

Crash Proof software helps the user to keep the updated backup of the data. This software designed to keep the images of the file indexes/ disk properties and keeps updating them at regular intervals. In this business /Organization world the data volume has raised so that computer dependency grown. As the dependency grows the down time increase as well due to data loss and the data lost cost us more than the recreation cost. Data recovery cannot provide you the satisfactory result every time. So the users have the requirement of software that can help users to keep the image of the data. Crash proof takes the image of your data in a regular interval and this information stored in a protected area. So the users use that data as per their need. You can recover your lost files due to help of this software and you can un-format any lost drive.

Features:-

Deleted file/ folder recovery	The software supports deleted file /folder recovery. It can recover the deleted/ lost files if they are deleted from your PC , even if they are not present in recycle bin.
